THE GREATEST INVENTION OF THE AGE.

West's Patent Galvanic Cement THE subscriber is now prepared to cover roofs of buildings, with a new and better article than ever before known. The public are aware that our Government has had scientific men experimenting, and that it has been the study of Archivets and Builders, for years, to discover an avticle for roofing purposes, that would stand the sudden changes of the weather, and be impervious to fire and water, and remain a permauent fixture. As yet, nothing has been attained without costing more than the people with. The contraction, expansion and rusting of metal roofs, are so great in changeable climates, that they become useles, unless being repaired at great expense yearly. In ingles are not fire proof, and cannot be used on flat roofs, and the various Compositions and Cements that have been brought into use for roofing, do not stand the action of the weather, but they run when it is warm, and crack when frosty, and after one or two years become or umbly, and worthless; whereas, the inventor of the Galvenia Cement, has labored twenty years to combine articles to obviate those difficultes, and can testify from his long experience, and numerous testimonials from reliable persons, who have had his combination applied to their buildings, that his Cement is the cheapest and best aticler ever before known. The combination of this Cement is such that it is calculated for entire new roofs, flat or attemp, overing over old chingles without removing them; lining eavestoughs, seaming around battlements, chimneys and sky-lights. Covering car-loops, steamer-decks, ac. This Cement, by its non-conduction and galvanism, prevents metal roofs from rusting and unsoldering, and resists the extremes of heat and cold, better than any thing ever invented, for entire roofs or for covering metal and the out side of wood buildings, making them fire proof. Its appearance is like slate; beautiful for the right to the State of For Roofing.

The undersigned having recurred the right to the State of Tennessee, will sell rights of Territory, by Counties or Towns, on reasonable terms.

The subscriber is also prepared to cover roofs of buildings, in any part of the State, at thort notice.

This Roof is now being put on in this city, for the benefit of all concerned, and warranted to excel all other modes of Roofing. The subscriber has 1 and his roofs of Roofing. of Roofing. PATENT ELASTIC FIRE & WATER-PROOF CEMENT ROOFING. .. THE undersigned is prepared to introduce into use in Tempessee W. E. CHILDS & CO.'S PATENT MASS-TIC PIRE AND WATER-PROOF CEMENT ROOFING, and ask the attention of Architects, Builders, Railroad Com-

anies, and the public to examine its superiority over other ARCHITECTS AND BUILDERS should not fall to examine this Roofing, as it is better and cheaper than any thing in use. The material forms a hard and smooth surface that will resist the action of the atmosphere in every cimate. It is impervious to water, elastic, and flexible. It contracts and expands with the changes of the atmosphere in every cimate. It contracts and expands with the changes of the atmosphere, and will neither evaporate, crack nor rot; and, as to its durability, there is no question.

It is practically imperishable, and will perfectfully resist any ordinary external exposure to fire, as is abundantly proved, and we will warrant it water-proof. We will engage to put our Roofing on over ordinary good sheathing, old shingles, tar and gravel, tin, sinc, copper, or iron roofs—it making no difference how steep or flat they may be—for seven dollars per one hundred square feet; it being far theaper than any Roof of the old style, and we are sure it will give better satisfaction.

It will also be found to be the best thing ever invented to cover or mend old leaky tin, tar and gravelroofs, or around It will also be found to be the best thing ever invented to sover or mend clid leaky in, tar and gravelroofs, or around chimneys, scuttles, dormar windows, and gutters, where the tin is rusted through. This Cement can be put on to last as long as stone, and form a perfect adhesion to any object to which it is applied. Tin Roofs can be painted over (and warranted not to leak) at two dillars and fifty cents per hundred square feet, which is cheaper and much better than paint. This Roofing will be found to be the best thing for covering large stoofs where they are exposed to fir—auch as Steam Mills, Saw Mills, Factories, Railroad Cavs, Bridges, Depots, Station Bouses, Steamboat Decks, and, in fact, every kind of Roof where there is an external exposure from fire. As the Roof is perfect, without a joint in it, it presents no chance for fire to communicate, and any ight substance will burn out without igniting. ight sub-tance will burn out without igniting.

This insurance Offices at Clocinoati, and other places where Childs & Co.'s Cement has been used, insure Buildings with Roofs covered with this Cement, at the same rates as for those covered with Iron, Copper or Tin.
